## SAFETY ALERT

### Hook bin pushed over wall

7 June 2021

*Note the content of this Safety Alert is suitable to be shared as a toolbox talk*

#### Incident Summary

When unloading a hook bin, the hook bin pushed 1100L bins against a wall. The wall fell down and damaged vehicles parked on the other side of the wall.

#### Initial Actions Taken

- Area was made safe and assessed to ensure that no people were injured
- Damage was assessed (wall and vehicles) and arrangements made for insurance claims
- Wall debris was removed, and area made safe and secure
- Investigation between refund point, logistics provider and WARRRL scheduled

#### Key Controls

Key Learnings include:

- Ensure that area where hook bins are to be placed (**three** in total for the various bin movements) and the access points/space for truck movements are kept clear **AT THE TIME** the logistics providers are scheduled. This should be included in the traffic management plan and safe work procedures.
